MOLD ABATEMENT GUIDE

What is Mold?

Molds are fungi that can be found both indoors and outdoors and number in species as much as 100,000. Some people are sensitive to molds and exposure to molds can cause symptoms such as nasal stuffiness, eye irritation, wheezing, or skin irritation. Others who have serious allergies to molds may have more severe reactions such as fever and shortness of breath. Mold should be treated as a health hazard and removed from your environment.

Where is Mold Found?

Molds grow best in warm, damp and humid conditions, spreading and reproducing by making spores. These spores can survive in harsh environmental conditions, such as dry conditions, that do not support normal mold growth. Molds are found in virtually every environment and can be detected, both indoors and outdoors, year-round. Outdoors they can be found in shady, damp areas or places where leaves or other vegetation decompose. Indoors mold can be found where humidity levels are high, such as basements or showers.

What if You Find Mold?

If you find mold in your property, do not disturb it. This will reduce the spread of spores and the chance of contamination in other areas of the structure. Risk Removal will coordinate with a professional mold inspector to identify the types of mold present and the severity of the problem.

Removing Mold

Mold should always be remediated by a trained professional using proper work methods to prevent further spread of spores. It can be remediated by demolishing or removing the material on which it grows or can be decontaminated in place, depending on the severity of the condition. It is important to eliminate the source of the moisture or high humidity so mold does not return after remediation.

Working with Risk Removal

Risk Removal, LLC., has provided environmental services in the Rocky Mountain region for more than 25 years. The company was organized in 1989 and has continuously held General Abatement Certificates since that time, and currently serves Wyoming, Nebraska and Colorado.
